Point of Care Testing: Glucose (waived)

UNIT: ACE

Date: 3/10/20

Edgar Pierluissi, MD
Medical Director, ACE

Barbara Haller, MD, PhD
Director, Clinical Laboratory

Clinical Indication

Fingerstick glucose testing for patients will be done to determine hypoglycemia or hyperglycemia.

Documentation

- Orders and results will be documented in the patient's electronic medical record or a downtime form.

Clinical Action

- If result is abnormal or critical, follow appropriate procedure. Refer to reference range in the Fingerstick Glucose policy in <http://www.sfgh-poct.org/glucose/>
- If the blood glucose result does not reflect the patient's clinical symptoms, or seems unusually high or low, perform a control test. If the control test confirms that the system is working properly, repeat the blood glucose test. If the repeated blood glucose result still seems unusual, send a sample to the Clinical Laboratory for blood plasma glucose testing.
