Barbara Haller, MD, PhD
Clinical Laboratory Director

1. Clinical Indications:
   - Screening to determine if the patient is infected with SARS-CoV-2

2. Documentations:
   - All results, pertinent positives and negatives are recorded in EPIC under POCT test results.
   - Verification and documentation of nurse competency performing the testing are maintained within the department and copies shared with the Point of Care department.

3. Clinical Actions:
   - All results will be reviewed by a Care Provider in the Emergency Department and appropriate clinical care and isolation procedures will be implemented.
   - Negative Results: Treat as presumptive negative and follow up with a COVID-19 molecular assay if COVID-19 illness is still suspected.
   - Positive Results: Treat or Refer according to current clinical practice.
