Barbara Haller, MD, PhD

Clinical Laboratory Director

1. Clinical Indications:
   - Screening: to determine the HIV status of new and returning patients interested in starting long-acting injectable pre-exposure prophylaxis (PrEP) for HIV prevention. A serum HIV Ag/Ab test will be submitted for all patients who have an indication for a POCT screen for HIV status.

2. Documentation:
   - All results, pertinent reactive and nonreactive are recorded in EPIC under POCT test results.
   - Verification and documentation of nurse competency in performing the testing are maintained within the department and copies shared with the Point of Care department.

3. Clinical Actions:
   - All results will be reviewed by the ordering Care Provider and reported to the State and County DPH per established protocol.
   - Reactive results: Reactive results prompt clinical workup for suspected HIV infection per protocol. Confirmatory testing should be sent and patient counseled on reactive result and next steps.
   - Nonreactive Results: With confirmatory testing pending, patient results will be interpreted in relation to the patient's clinical presentation and discussed with patient as such. Patient will be informed that POCT screen for HIV is nonreactive.

Certificate Of Completion

Envelope Id: A0064A3A107946C4907A7D9CDC868615

Status: Completed
